# Put PDF content to work

## Reuse document text

---

Extract digital or scanned PDF pages

---

Review text beside its source

## Keep useful structure

---

Work with headings, lists and tables

---

Correct reading order and block types

## Check difficult pages

---

Find blocks marked  
Needs check

---

Read a region again when needed

## Take content onward

---

Download data or readable documents

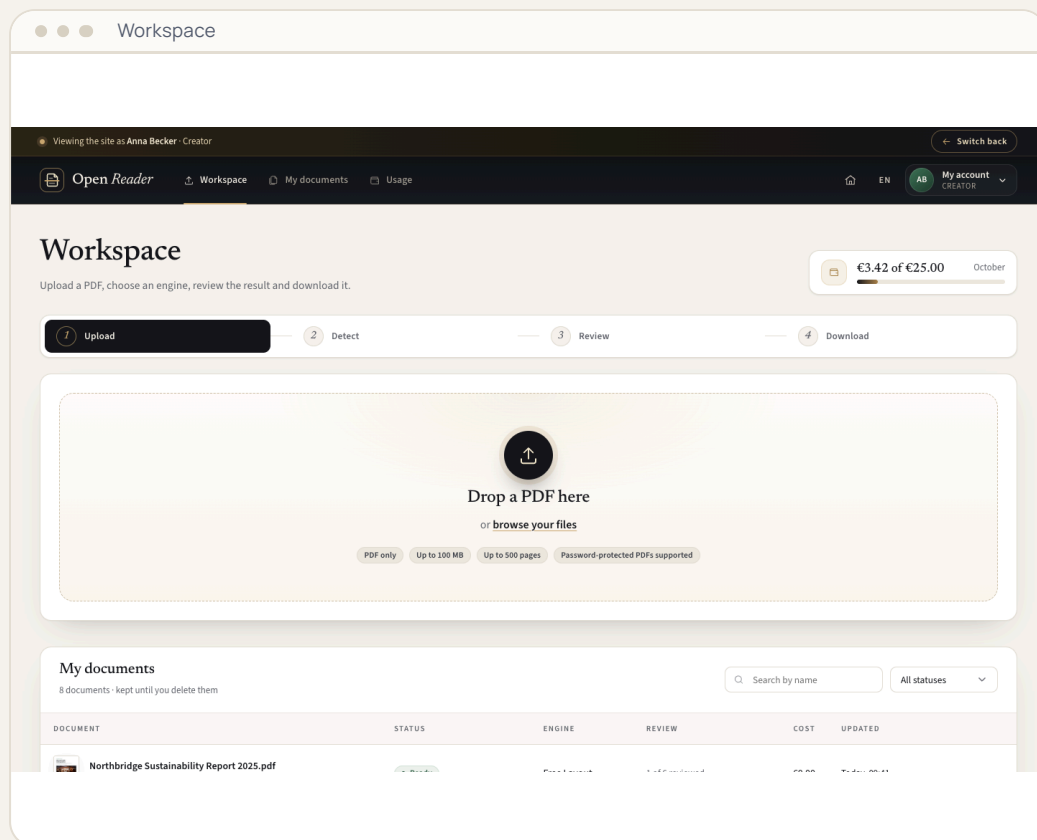

---

Bundle files and images in a ZIP

# One document, one workspace

# Start with the PDF you have

## Drop in a PDF

Start from a digital PDF or a scanned document.

## Return to your documents

Open, rename, download or delete documents from your workspace.

## Prepare before processing

Quick scan identifies pages and text availability before you choose an engine.

# Choose how the pages are read

Quick scan done

PAGES: 6  
TEXT LAYER: 5 pages  
LOOKS SCANNED: 1 page (page 5)  
LANGUAGE: English, detected  
PASSWORD: Not required

## Free engines on your server

Free Text handles text and OCR. Free Layout adds local layout analysis.

## Use a configured AI engine

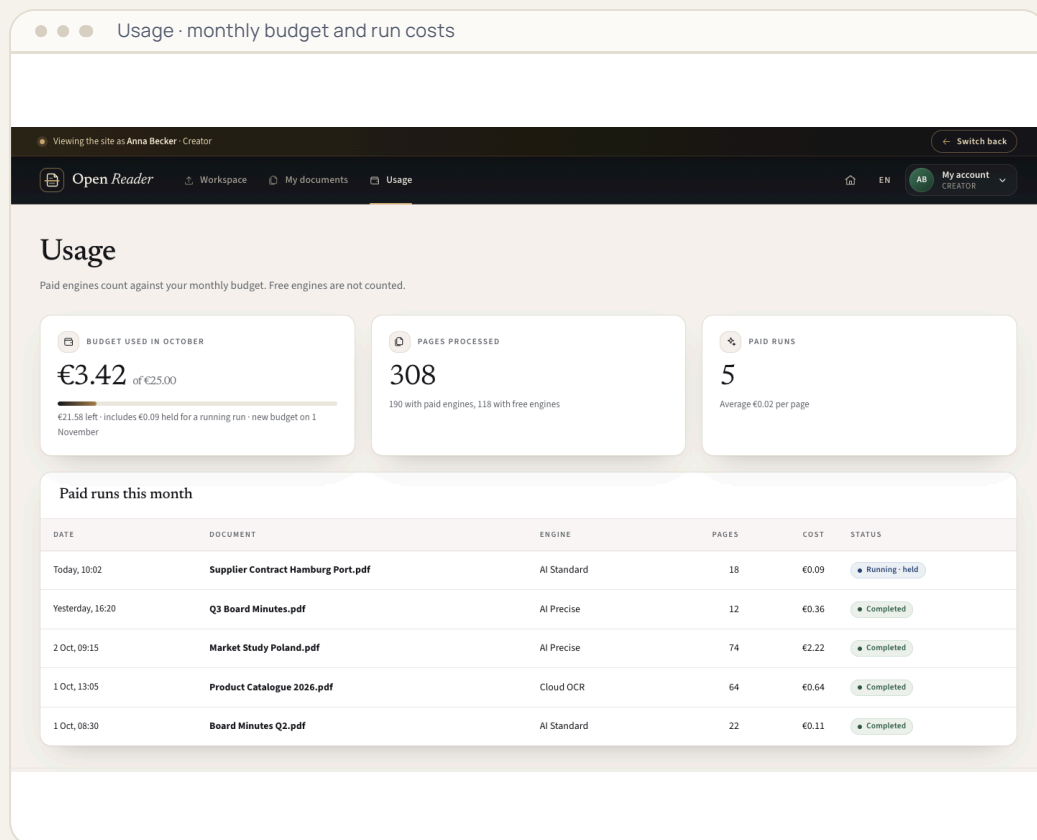

Choose an available engine for documents that need a different approach.

## Process the pages you need

Set page range and language, then review the estimate before starting.

# Keep processing cost visible

## See the estimate first

Paid runs show the estimated cost and need your confirmation.

## Apply user and site budgets

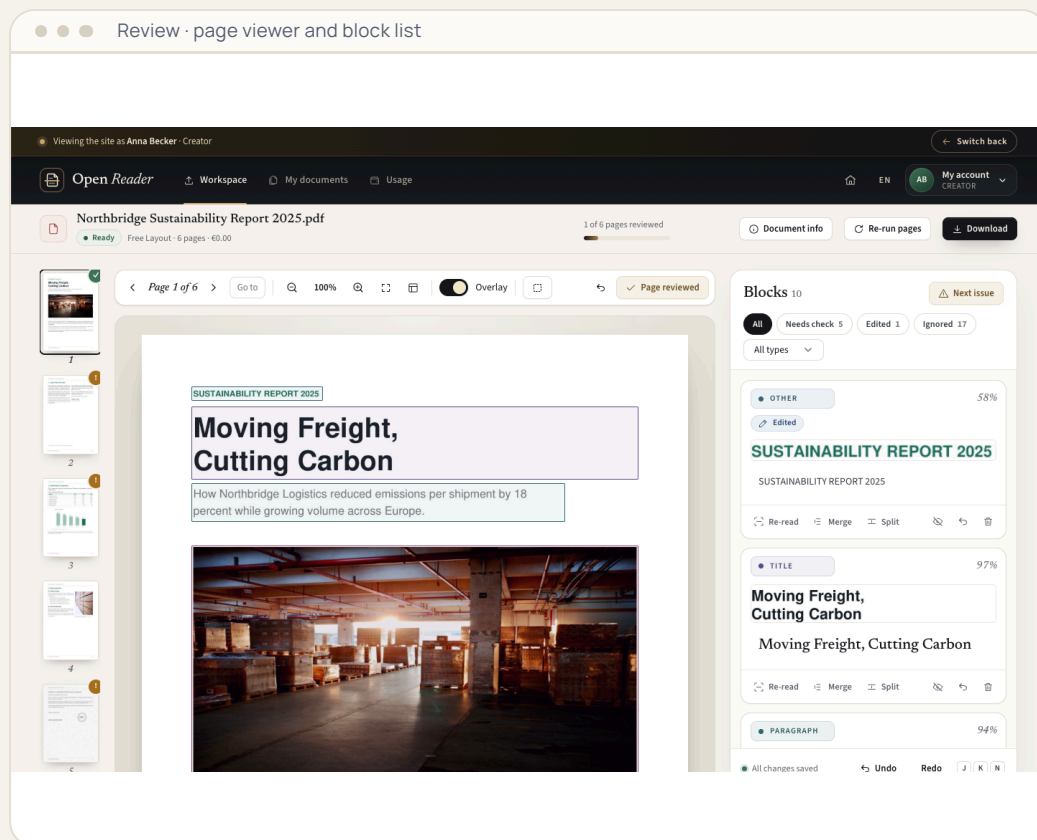

A paid run starts only when both budgets have room for its estimate.

## Follow actual usage

Run records track the selected engine, usage and actual processing cost.

# Review content beside its source

## See where each block belongs

Selecting a page region highlights the matching content block.

## Focus your checking

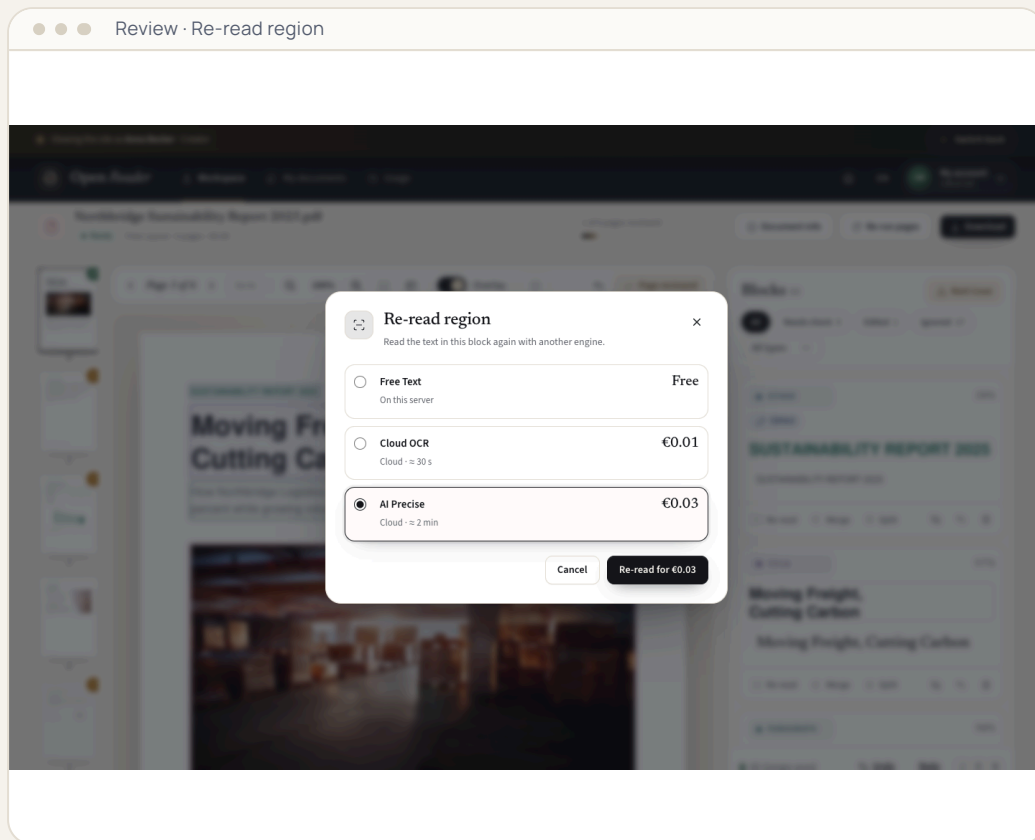

Filter by type, Needs check or Edited, and move to the next issue.

## Correct and save

Edit text, block type and reading order. Changes save as you work.

# Fix a region or try the page again

## Adjust what gets read

Resize a region, draw a missed block, or select a source image or crop.

## Read a region again

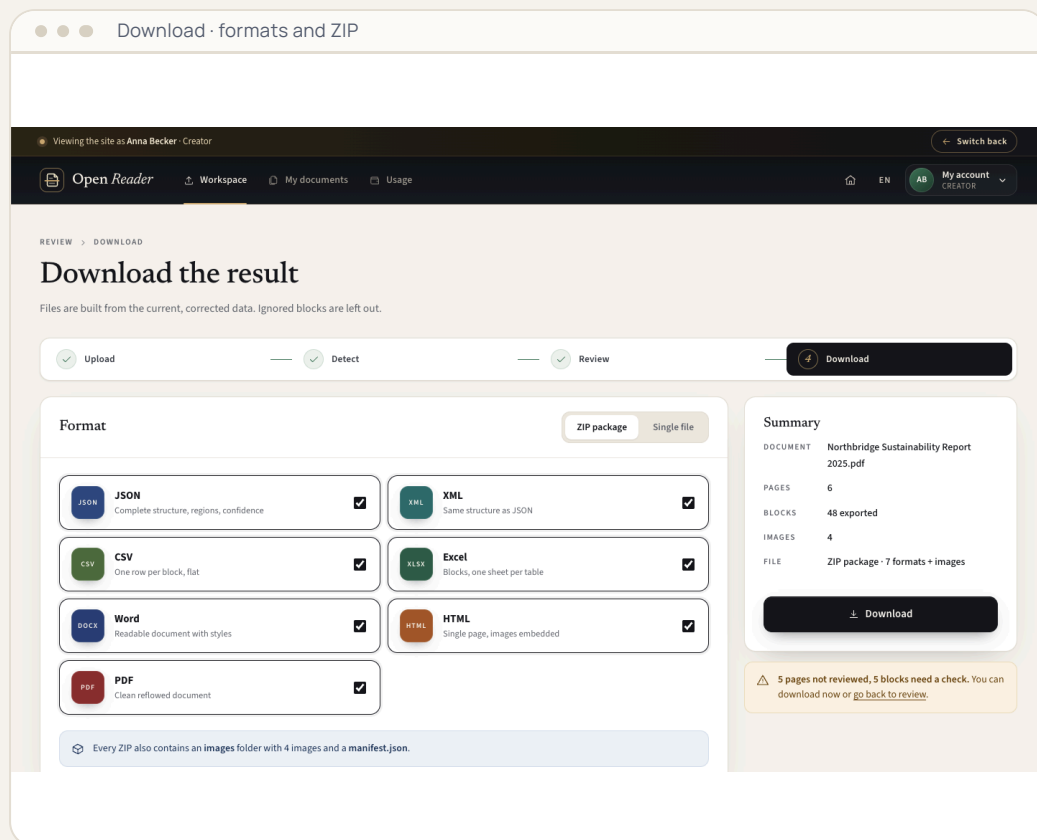

Choose another engine for the selected region, with cost confirmation when paid.

## Re-run selected pages

Confirm replacement of page edits before a new page result arrives.

# Download the content you reviewed

## Choose a format

Download JSON, XML, CSV, Excel, Word, HTML or PDF when enabled.

## Bundle files and images

ZIP combines selected formats with full-resolution extracted images.

## Use your current corrections

Exports follow reading order and exclude ignored or deleted blocks.

# Select the output for your next task

## Structured data

---

JSON and XML retain the document, page and block structure.

---

Coordinates, types and extraction metadata support downstream use.

---

For systems that need the complete model

## Spreadsheets

---

CSV gives you one row per content block.

---

Excel adds separate table sheets with merged cells and headers.

---

For sorting, checking and working with tables

## Readable documents

---

Word and HTML assemble text, lists, tables and images.

---

PDF is rebuilt in reading order rather than the original page layout.

---

For editing or reading extracted content

# Run a dedicated system for your team

## Your instance

---

Install on your cloud or on-premise infrastructure.

---

Use the same product package with your site name, logo and accent colour.

---

A separate installation for each customer

## Your processing choices

---

Run Free Text and Free Layout inside your infrastructure.

---

Enable customer-owned AI credentials for configured engines.

---

Engine choice defines the processing boundary

## Your document access

---

Each owner accesses their own documents.

---

Private files and signed download links protect access to outputs.

---

Retention settings control stored documents

# Give each person the right controls

## Public visitor

---

Use a Free-only  
Trial when enabled

---

Work within  
the current  
browser session

## Creator

---

Upload and  
review own PDFs

---

Download results  
and see own usage

## Content Admin

---

Manage engines,  
settings and  
site content

---

Review usage  
across the site

## Admin

---

Manage accounts  
and branding
